DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Hurko (US4002883).

Hurko discloses a ceramic heater comprising a ceramic substrate (10) and a resistance heating element (12) formed on the surface of the ceramic substrate (column 3, lines 41-45), wherein irregularities are formed on the side face of the resistance heating element (Figure 1, column 6, lines 16-24) and the heating element is formed to be drawn as a curve (Figure 1).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2, and 4-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hurko in view of applicant's admitted prior art.

Art Unit: 3742

Hurko discloses all of the recited subject matter except a ceramic substrate of carbide or nitride and irregularities 100 micrometers or less. Applicant discloses a ceramic substrate of carbide or nitride (specification, page 1, lines 20-25). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included a carbide or nitride ceramic substrate as disclosed by applicant in the ceramic heater of Hurko because, carbide or nitride ceramic substrates are good conductors of heat and can withstand very high temperatures. In addition, Hurko in view of Applicant discloses the claimed invention except for irregularities 100 micrometers or less. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included irregularities 100 micrometers or less, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.
